

Abstract

This spool 10 is provided with a first spool unit 11, a second spool unit 12, and a support mechanism 13 for supporting the second spool unit 12. The first spool unit 5 11 is provided with a short cylindrical unit 14, and a fishing line is wound around the short cylindrical unit 14. The second spool unit 12 is provided with a short cylindrical unit 25, and another fishing line is wound around the short cylindrical unit 25. The first spool 10 unit 11 is provided with a support shaft 18, and the second spool unit 12 is provided with a receiver shaft 29. The support mechanism 13 is constituted of the support shaft 18 and the receiver shaft 29. The receiver shaft 29 is coupled to the support shaft 18 so that the second 15 spool unit 12 is housed inside the first spool unit 11. The second spool unit 12 rotates inside the first spool unit 11. The support shaft 18 is provided with a stopper 22 which prevents an unintentional removal of the second spool unit 12 from the first spool unit 11.
